1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stenger of record (DE 3608489A1) in view of Katata et al of record (5,815,601) for the same reasons as set forth in paragraph (3) of the last Office Action (see Paper no. 13).

Regarding the applicants' arguments at pages 2-4 of the request for reconsideration filed July 9, 2002 concerning in general that "... Thus, as the background is recorded out of focus and with little resolution, its purported later inclusion with foreground information would not the background information visible, it would only show foreground information with background information that was recorded out of focus with little resolution. Background only becomes visible upon the detection of motion information, otherwise, it remains out of focus ... Katata, on the other hand, discloses an image encoder that pus image data into blocks and dynamically encodes them so that the image quality of a selected area becomes better than that of other areas ... Stenger is concerned with recording the background out of focus, there is no suggestion or reason to combine this references with Katata to transmit at different quantization levels. In fact, Stenger discloses that background information causes problems determining the contours of foreground information ... thus the solution to record out background information, and recommend enhancement by masking. Applicants respectfully submit that an artisan would not

find suggestion to combine teachings of Stenger with Katata because the background information (such as background noise, shadows) will create problems identifying and transmitting foreground information ...”, the Examiner wants to point out that though Stenger may teach that background structures will cause problems at the contours of moving images, the background is recorded out of focus, and the background only becomes visible upon the detection of motion information, the critical issue at hand is that Stenger nevertheless teaches a threshold process (i.e., 15 of Figure 4) for discriminating foreground and background data informations (see page 4, lines 4-10), and it is submitted again that it is considered obvious to provide the DCT block classifier and an encoder for providing different quantization level processings for foreground and background image data as taught by Katata et al for the stereo image videophone system of Stenger. As such, it is further submitted that the claimed invention is rendered obvious in view of the combination of Stenger and Katata et al.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
